HVOR MEGET?

HVORHENNE?

The vision of a more sustainable future

- The Danish government adopted a climate law concerning that Denmark must reduce its greenhouse gases by 70% before 2030
- Region South Denmark's development strategy – The Future of South Denmark
 - Reduce CO₂ discharges
 - Change to more circular economy
 - General climate adaptation
- We will reach the goal by
 - Green energy: increase the carbon soil sequester, use of more renewable energy sources and energy efficiency improvement
 - Green waste sector and circular economy: sorting in more fractions (13), more recycling, behavior change
 - Green cars: more electric cars and electric charging, public transport

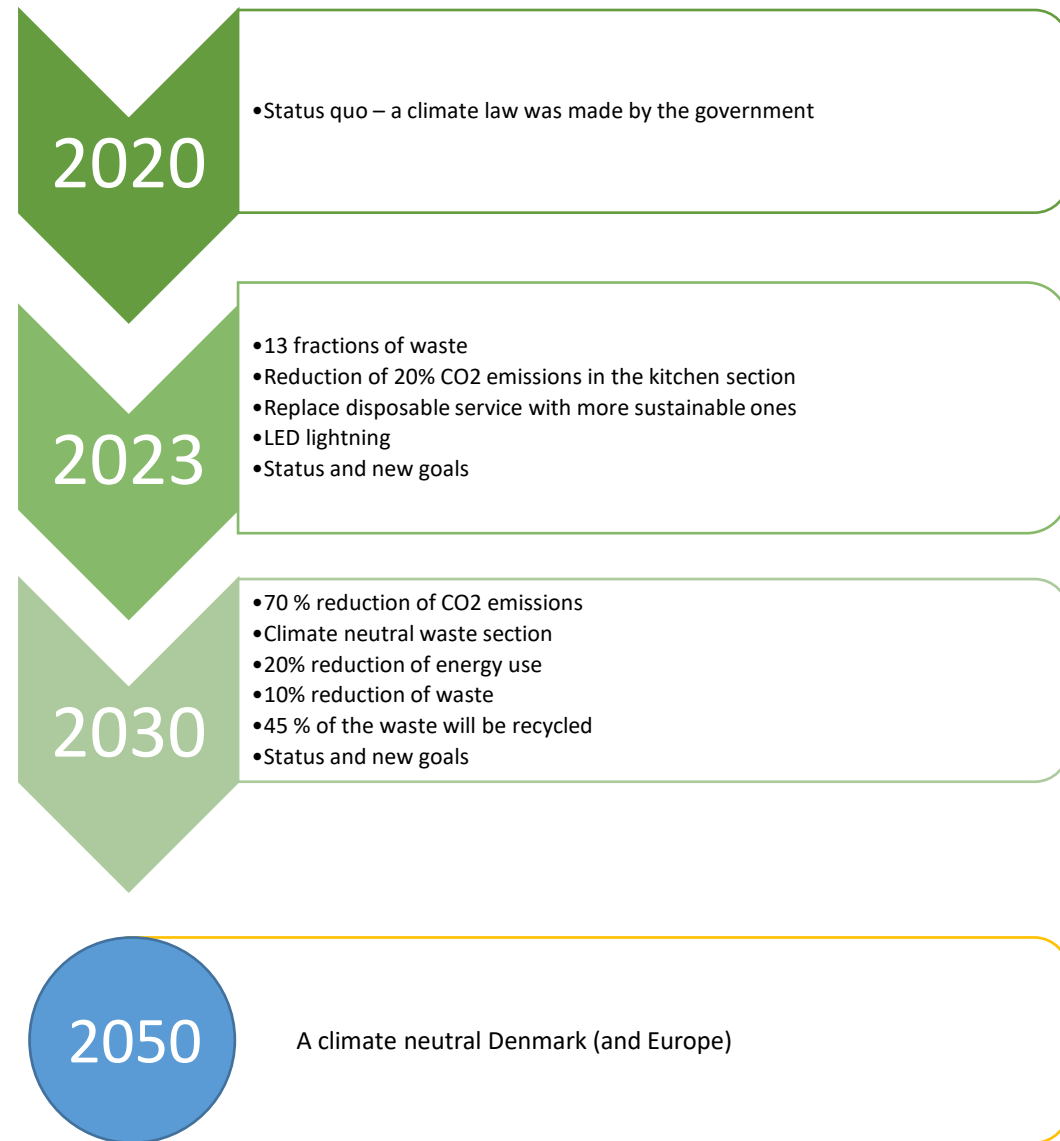

Regional goals and OUH

- Odense University Hospital
 - Supply chain management
 - Purchase and warehouse
 - Transportation and waste center
 - Central sterilization
 - Food supply

Approaching sustainability

- "Wild on purpose" – more wild nature
- LED-light bulbs
- Electric cars
- The use of wind and solar energy
- Less food waste
 - Local products
 - Updates from the patient departments
 - Too-good-to-go for employees
- Circular economy
 - Green purchases – better quality and fewer disposable products
 - Increased focus on sorting of waste in more fractions

HVAD?

HVOR MEGET?

HVORHENNE?

New hospital – new opportunities

- DGNB (Green building Council Denmark)
- Solar cells
- Public transport (Light railway)
- Implementation of sorting of waste in 13 fractions in a new system
- New goals in 2023

Future goals we strive towards

National goals in 2030

CO₂-reduction 70%

Regional goals in 2030

Reduce the energy use with at least 20%

Reduce the total amount of waste by 10%

45% of the waste produces will be recycle

Section goals in 2023 and 2025

Kitchen: In 2023 – 20% reduction of CO₂-emissions and 25% in 2025
